Fetal Monitor BFM-10

Intended use	Continuous monitoring, display, and recording of fetal heart rate (FHR) and uterine activity (UA) for antepartum testing and monitoring. Fetal heart beat detection, from 14 th week of pregnancy
Power source	230V/50Hz, 0.1A, AC
FHR monitoring: Ultrasound probes	B7P2MHz – wide-angle 7-crystal probe, from 14 th week B7P1MHz – TWIN wide-angle 7-crystal probe
FHR measurement range	50-210 bpm
Uterine Activity Monitoring: Measurement range	0-100%
TWIN monitoring: Record Mode Annotated record	Common and parallel Record mode, Heart Beat Coincidence events
Printer: Annotated record	Roll paper: 110mm or 112mm Chart speed: 1cm/min , 2cm/min Patient data heading, time, date, paper speed
Set-up	FHR Alert Upper/Lower Limit Value Alarm Print Speed Auto Print Period Twin Record Mode Twin FHR Record Range Date, Time and Language Record without UA TOCO GAIN
Dimensions of main unit	260x200x100 mm
Weight	2 kg
Accessories	B7P2MHz probe, B7P1MHz probe (TWIN option), TOCO probe, event marker, roll of paper, 2x belt (3x belt TWIN option), gel
Features	ARC Feature – the best FHR signal control Objective fetal heart rate calculations Easy operation
Order information	BFM-10 - single fetal monitoring BFM-10 TWIN - twin fetal monitoring
